# HANDOUT TO BE GIVEN TO PATIENT REFERRED TO THE CLINICAL ACCESS SERVICE

Hello,

Your physician or frontline specialized nurse practitioner has referred you to the **Clinical Access Service at LaSalle Hospital** (**Accueil clinique de l'Hôpital de LaSalle**) for exams or a consultation with a specialist.

The nurse clinician from the Clinical Access Service will contact you to schedule an appointment as soon as the consultation request is received. She will be in charge of organizing the care trajectory for the services you may require.

Please make sure that you are easily reachable, Monday to Friday (except holidays), from 8 am to 4 pm.

Once you get to the hospital, go to the Outpatient Clinic reception (*secrétariat des cliniques externes*) located at the main entrance to check-in. You will then be directed to the Clinical Access waiting area, located on the <u>Ground Floor</u>, <u>Wing C, Room RC-009</u>.

#### The day of your visit, please have the following items with you:

- Your valid health insurance card (RAMQ)
- An up-to-date list of all your medications

If you have any questions or require additional information, please contact the nurse clinician at the Clinical Access Service by calling **514 362-8000 extension 32816**.

#### TO GET THERE:

LaSalle Hospital is located at the corner of Dollard Avenue and Champlain Boulevard. The parking lot is accessible via Champlain Boulevard.

#### **Public transportation:**

Metro: green line - Angrignon station - 110 or 495 bus

Bus: 110, 112, 123, 495

Making changes to certain lifestyle habits can also reduce the risk of a recurrence and related complications. Here are examples of changes you can make:

- Increase your fluid intake (drink up to 2 litres or more of water each day in hot weather, unless contraindicated by your doctor)
- When in pain, drink smaller amounts of water more often
- Avoid bottled water that is rich in mineral salts.
- Reduce your salt intake
- Reduce the amount of sugar, salt and fat in your diet
- Limit your alcohol intake
- Quit smoking
- Opt for a high fibre diet
- If necessary, ask for a consultation with a nutritionist who can advise you on your diet

#### Information on your prescribed treatment

Your doctor may prescribe painkillers. The pharmacist or the nurse at the Clinical Access Service will give you a handout on the prescribed treatment.

**Important**: Before taking over-the-counter painkillers or natural products, please consult your pharmacist.

#### **Questions?**

- The nurse at the Clinical Access Service Monday through Friday, from 8 am to 4 pm, except statutory holidays, at 514-362-8000 ext. 32816;
- Info-Santé nurse by dialing 811. This service is available 24/7;
- Your pharmacist can also advise you when it comes to your medication.

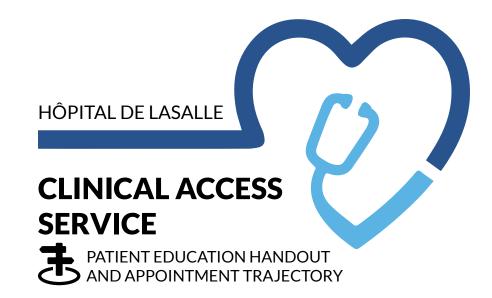

#### Other available resources

• The Kidney Foundation of Canada. Visit the website: kidney.ca

Both resources are available at your CLSC or online at www.osezlasanté.ca:

- Health Education Centre to review your lifestyle habits;
- Smoking Cessation Centre to help you stop smoking.

PREPARED BY: Sylvie Aubin, Nurse Clinician. COLLABORATORS:Dr. Henry Lapin, Internist and Micheline Hotte, Senior Nursing Advisor with the ND REVISED BY: Laetitia Olone Konzabi, inf. B.Sc, M.Sc.(c), Nursing Advisor.

#### **RENAL COLIC**

YOUR APPOINTMENTS:

Location: Urology Clinic FMG Stillview

_	
•	Blood tests, urinalysis and urine culture:  Date and time:
	Location: Clinical Access Service, Ground Floor, Wing C, Room RC-009
•	CT scan of the abdomen and pelvis:
	Date and time:
	Location: Medical Imaging Department, Ground Floor
•	X-ray of the abdomen:
	Date and time:
	Location: Medical Imaging Department, Ground Floor
•	Urology consultation (if needed):
	Date and time:

Centre intégré universitaire de santé et de services sociaux de l'Ouest-del'Île-de-Montréal

#### What is renal colic?

Renal colic is not a disease in itself, but pain that occurs when a kidney stone (calculi or lithiasis) disrupts the natural flow of urine in the urinary tract or when there is inflammation present in the urinary tract. Urine, produced in the kidneys, travels to the bladder through two thin tubes called ureters. The urine is then excreted from the body through the urethra, which is a tube that connects the bladder to the urinary meatus.

Stones, which are made up of crystals, can become lodged in the kidneys, bladder, ureters or urethra. It is not uncommon for there to be several stones of different sizes.

#### Why use the Clinical Access Service?

The nurse at the Clinical Access Service will perform an assessment with the help of a health questionnaire. Blood and urine tests will also be requested and, depending on the results, you may be asked to undergo a CT scan of the abdomen and pelvis and, if required, an abdominal x-ray to confirm the presence, number, location and size of the kidney stones.

The nurse at the Clinical Access Service will keep your doctor or nurse practitioner specializing in primary care informed. Your healthcare provider will receive a copy of all your laboratory and diagnostic test results.

## What are the risk factors for the formation of kidney stones?

- Being male: kidney stones are more common in men
- · Family history
- Being overweight
- Other medical conditions (poorly managed diabetes, gout)
- Certain medications (e.g., diuretics, calcium, sulfonamides, quinolones)
- Prolonged immobilization
- · Not drinking enough
- Certain eating habits

HAVING A HEALTHY ACTIVE LIFESTYLE CAN HELP REDUCE YOUR RISK.

#### What are the symptoms of renal colic?

While stones can affect both kidneys, an obstruction is unlikely to occur in both kidneys simultaneously, which will allow you to continue to urinate. Here is a list of symptoms associated with kidney stones:

- Pain/discomfort in the lower back or sides, more specifically at the bottom
  of the ribcage and extending to the genital area
- Difficulty urinating or urge to urinate frequently
- Limited relief with over-the-counter medication or when changing position
- Occasionally, blood in the urine as well as nausea or vomiting

### What signs and symptoms should I watch out for?

- Chills or fever (T° ≥ 38.5 °C)
- Pain not relieved by analgesics (pain relievers)
- A significant amount of blood in your urine
- An inability to urinate for more than 24 hours

If you experience one or more of these symptoms, do not wait for your appointment at the Clinical Access Service. Go to the Emergency as soon as possible. When you report to the Emergency Department, tell the triage nurse that you are currently being assessed and are followed at the Clinical Access Service and that you may be experiencing a possible complication.

## 3

#### Are there risks or complications?

Left untreated, renal colic can result in an upper urinary tract infection and kidney failure (permanent kidney damage).

Can I continue to be physically active?

That usually depends on the severity of your symptoms. Continuing to be physically active and doing light-to-moderate activities is usually not a problem.
